

MANAGEMENT’S DISCUSSION AND ANALYSIS

FOR THE THREE AND SIX MONTHS ENDED JUNE 30, 2017
(Containing information through August 10, 2017 unless otherwise noted)

Background

This Management’s Discussion and Analysis (“MD&A”) has been prepared based on information available to Belo Sun Mining Corp. (“we”, “our”, “us”, “Belo Sun” or the “Company”) as of August 10, 2017 unless otherwise noted. The MD&A provides a detailed analysis of the Company’s operations and compares its financial results with those of the previous periods and should be read in conjunction with our condensed interim consolidated financial statements for the three and six months ended June 30, 2017 as well as our audited annual consolidated financial statements and MD&A for the year ended December 31, 2016. The financial statements and related notes of Belo Sun have been prepared in accordance with International Financial Reporting Standards (“IFRS”) and do not reflect the adjustments that would be necessary should the Company be unable to continue as a going concern and therefore be required to realize its assets and liquidate its liabilities and commitments in other than the normal course of business and at amounts different from those in the accompanying financial statements.

Please refer to the notes of the December 31, 2016 annual consolidated financial statements for disclosure of the Company’s significant accounting policies. Unless otherwise noted, all references to currency in this MD&A refer to Canadian dollars. References to US\$ refer to the United States dollar, and R\$ refer to the Brazilian Real.

The Company’s Annual Information Form can be found under the Company’s profile at www.sedar.com. Additional information, including our press releases, has been filed electronically through the System for Electronic Document Analysis and Retrieval (“SEDAR”) and is available online under the Company’s profile at www.sedar.com. Additional information relating to the Company can be found on the Belo Sun website at www.belosun.com.

Stéphane Amireault, P.Eng (B.Eng; MScA), Vice-President of Exploration for Belo Sun, is the in-house Qualified Person under National Instrument 43-101 for geology. Joseph C. Milbourne, FAusIMM, Vice-President of Technical Services for the Company, is the in-house Qualified Person under National Instrument 43-101 for all technical materials (except geology). Mr. Amireault and Mr. Milbourne have reviewed and approved the scientific and technical information in this MD&A.

Cautionary Statement Regarding Forward-Looking Information

Except for statements of historical fact relating to Belo Sun, certain information contained herein constitutes forward-looking information under Canadian securities legislation. Forward-looking information includes, without limitation, statements with respect to: possible events, the future price of

gold, the estimation of mineral reserves and mineral resources, the realization of mineral reserve and mineral resource estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of the development of projects and new deposits, success of exploration, development and mining activities, permitting timelines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage. The words “anticipates”, “plans”, “expects”, “indicative”, “intend”, “scheduled”, “timeline”, “estimates”, “forecasts”, “guidance”, “opportunity”, “outlook”, “potential”, “projected”, “schedule”, “seek”, “strategy”, “study” (including, without limitation, as may be qualified by “feasibility” and “pre-feasibility”), “targets”, “models”, or “believes”, or variations of or similar such words and phrases or statements that certain actions, events or results “may”, “could”, “would”, or “should”, “might”, or “will be taken”, “occur” or “be achieved” and similar expressions identify forward-looking information. Forward-looking information is necessarily based upon a number of estimates and assumptions that, while considered reasonable by Belo Sun and its external professional advisors as of the date of such statements, are inherently subject to significant business, economic and competitive uncertainties and contingencies. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements.

Forward-looking information is provided for the purpose of providing information about management’s expectations and plans relating to the future. All of the forward-looking statements made in this MD&A are qualified by these cautionary statements and those made in our other filings with the securities regulators of Canada including, but not limited to, the cautionary statements made in the “Risk Factors” section of our most recently filed Annual Information Form and this MD&A. These factors are not intended to represent a complete list of the factors that could affect Belo Sun. Economic analyses (including mineral reserve and mineral resource estimates) in technical reports are based on commodity prices, costs, sales, revenue and other assumptions and projections that can change significantly over short periods of time. As a result, economic information in a technical report can quickly become outdated. Belo Sun disclaims any intention or obligation to update or revise any forward-looking information or to explain any material difference between subsequent events and such forward-looking information, except to the extent required by applicable law and regulations.

Overview of the Company

Belo Sun is a Canadian-based mineral exploration and development company with a portfolio of gold-focused properties in Brazil including its principal project, the Volta Grande Project in Pará State. Belo Sun’s other properties are the Patrocínio Gold Project in Pará State and the Rainbow Alexandrite Project in Goiás State.

Highlights for the six months ended June 30, 2017 include:

- In February 2017, the Company received its construction licence (“LI”) for the Volta Grande Project from the Brazilian State Government of Pará. However, shortly after receiving the LI, the Company received an order issuing a temporary 180-day injunction halting certain work related to the LI. The injunction is related to the relocation plan and the agreement with INCRA (the National Institute for Colonization and Agrarian Reform, the Brazilian federal government authority administering land reform issues) regarding the overlap of a small portion of the Company’s mining concessions with their urban development project that were approved in the LI. In June 2017, this injunction was lifted by the Agrarian Court of Altamira.
- In February 2017, the Company awarded a contract to FLSmidth for the first phase of turnkey Engineering, Procurement and Construction for the Volta Grande Project. The contract includes the completion of basic engineering, selection of construction contractors, the execution planning

of the process facility construction and the purchase of a semiautonomous grinding (“SAG”) mill. The SAG mill represents the first significant equipment purchase for the Volta Grande Project.

- In April 2017, the Company received an interim suspension order related to the LI. According to the order, the LI is suspended until the indigenous study, completed by the Company, has been approved by Funai, the indigenous affairs agency of Brazil. The Company believes that following a review of the previously completed indigenous study, the Brazilian Federal Regional Court will reconsider their decision. The Company continues to work diligently towards positively resolving this suspension order in a timely manner.
- In June 2017, the Company amended the terms of the Engineering, Procurement and Construction contract with FLSmidth to allow for a delay in the payment terms of the SAG mill as a result of the suspension of the LI. The amended terms reallocated a portion of the SAG down-payment to offset costs for completing the basic engineering and deferred the payment of the SAG until July 2018.
- The Company continued exploration data compilation during 2017. The objectives of the program are to get ready to expand the mineral resources in the North Block; expand and connect mineral resource areas in the South Block; and demonstrate the mineral growth potential along the 120-km-strike property with greenfield exploration activities. The Company has cut back its exploration budget until the injunctions relating to the LI are reversed.

Outlook

For 2017, the Company continues to focus on the advancement of the Volta Grande Project with three main objectives:

- 1) Continuing project optimization with engineering studies, construction planning optimization and capital and operational cost reviews, including actively recruiting and building strong construction, management and mining teams with extensive experience building and operating mines in Brazil.
- 2) Continuing to seek and evaluate the best funding solution for the Volta Grande Project.
- 3) Continuing exploration activities to expand and upgrade mineral resources in the North and South Blocks of the Volta Grande Project, and to demonstrate the mineral growth potential along the greenstone belt.

In February 2017, Belo Sun received the LI for the Volta Grande Project from the Brazilian State Government of Pará. The LI is the final governmental approval authorizing the Company to proceed with construction and development of the Volta Grande Project. The Volta Grande Project consists of an open pit, a gold recovery process facility, water and tailings management and supporting infrastructure.

However, shortly after receiving the LI, the Company received an order from a judge of the Agrarian Court of Altamira issuing a temporary 180-day injunction halting certain work related to the LI. The purpose of the injunction was to provide time for the relocation of certain families living near the project site and the finalization of the agreement with INCRA involving the overlap of a small portion of the Company’s mining concessions and their urban development project. The relocation plan approved in the LI authorizes the families to relocate at a time of the families’ choosing with relocation expenses covered by the Company. This injunction was lifted by the Agrarian Court in June 2017.

In April 2017, the Company received an interim suspension order related to the LI by the Brazilian Federal Court (the “Court”). According to the order, the LI has been suspended until the indigenous study, completed by the Company, has been approved by Funai, the indigenous affairs agency of Brazil. According to Brazilian regulations, indigenous studies are required if indigenous lands are located less than 10 km from a mining project. The Company completed indigenous studies on the two closest indigenous lands, located 12 and 16 km away from the Volta Grande Project, which was accepted by the Secretary of State for Environment and Sustainability. The interim decision by the Court was granted without hearing arguments from either the State of Para or from the Company. The Company believes that following a review of the previously completed indigenous study, the Court will reconsider their position.

The Company is also engaged in tax stabilization discussions with the Pará state government that, if successful, have the potential to provide a long- term reduction in indirect taxes and would provide a positive impact on the project economics. These discussions are ongoing and there can be no certainty that a positive result will be negotiated.

Summary of Quarterly Results

The following is a summary of the Company’s financial results for the eight most recently completed quarters:

	30-Jun	31-Mar	31-Dec	30-Sep	30-Jun	31-Mar	31-Dec	30-Sep
	2017	2017	2016	2016	2016	2016	2015	2015
Net (loss)	(\$636,995)	(\$8,838,843)	(\$3,146,089)	(\$4,035,960)	(\$5,826,646)	(\$2,469,434)	(\$1,884,969)	(\$1,246,706)
Net (loss) per share	(\$0.00)	(\$0.02)	\$0.00	(\$0.01)	(\$0.02)	(\$0.01)	(\$0.01)	(\$0.00)
Working Capital*	\$61,049,695	\$63,862,795	\$74,384,000	\$76,667,937	\$11,052,543	\$15,357,321	\$5,698,996	\$8,870,494
Total Assets	\$87,434,108	\$90,178,134	\$95,366,185	\$98,546,047	\$28,504,003	\$29,514,638	\$20,890,407	\$21,838,320
Total Non-current Liabilities	\$1,039,188	\$2,317,396	\$1,223,172	\$1,050,696	\$379,965	\$0	\$0	\$0

* Working Capital is defined as current assets minus current liabilities. Working capital is a Non-IFRS figure without a standardized meaning. Please see “Non-IFRS Measures” below for a reconciliation.

Factors Affecting Comparability of Quarters

Results of operations can vary significantly as a result of a number of factors. The Company’s level of activity and expenditures during a specific quarter are influenced by a number of factors, including the level of working capital, the availability of external financing, the time required to gather, analyze and report on geological data related to its properties and the nature of activity, and the number of personnel required to advance each individual project.

In addition, the granting of stock options and deferred share units (“DSUs”) in a particular quarter gives rise to stock-based compensation expense. In the second quarter of 2017, the Company recorded a credit to stock-based compensation expense of \$1,446,353 (Q1-2017 – \$4,425,543; Q4-2016 – \$640,715; Q3 – \$1,702,566; Q2 – \$3,656,681; Q1-2016 – \$Nil; Q4-2015 – \$Nil; Q3-2015 – \$Nil). DSU expense is dependent on the value of the Company’s shares which can fluctuate. The credit during Q2-2017 results from a decrease of the Company’s share price.

Exploration expenditures during quarters vary and can cause earnings to fluctuate. In the second quarter of 2017, the Company recorded exploration and evaluation expenses (including engineering studies) of \$737,204 (Q1-2017 – \$1,250,641; Q4-2016 – \$1,090,004; Q3 – \$1,061,575; Q2 – \$707,491; Q1-2016 –

\$662,059; Q4-2015 – \$648,755; Q3-2015 – \$716,339). The Company began deferring development expenditures, including engineering expenses, during the first quarter of 2017. Costs during 2016 included those for further studies working towards the application of the Company's LI.

Also contributing to fluctuating quarterly net (losses) are changes in foreign exchange rates. The Company holds a portion of its monetary assets and liabilities in Brazil and therefore changes in the rate of exchange between the Brazilian Real, United States dollar and the Canadian dollar result in reported gains and losses on foreign currency fluctuations.

The increase in assets during Q1-2016 reflects the increase in cash resulting from the private placement financings with Agnico Eagle Mines Limited and Sun Valley Gold LLC. The increase in assets during Q3-2016 reflects the increase in cash from a bought-deal financing completed by the Company. There were also land purchases during 2016. The increase in non-current liabilities represents the DSU liability for those DSUs that vest more than one year from the period end.

Non-current liabilities represents the DSU liability. This increased in Q1-2017 as a result of a new grant of DSUs in conjunction with an increase in the Company's share price since the prior quarter.

Results of Operations – Financial

The following is a discussion of the results of operations of the Company for the three and six months ended June 30, 2017. This should be read in conjunction with the Company's condensed interim consolidated financial statements for the three and six months ended June 30, 2017 and related notes.

For the quarters ended:

	Three months ended June 30,	
	2017	2016
Net loss	\$ (636,995)	\$ (5,826,646)
Interest income	(178,135)	(53,310)
Salaries, wages and consulting fees	781,542	656,264
Legal and audit fees	161,900	32,515
General and administration	566,283	521,373
Depreciation	45,148	51,293
Share-based payments	(1,446,353)	3,656,681
Exploration and evaluation expenses	737,204	602,821
Engineering studies	-	104,670
(Gain)/loss on foreign exchange	(30,594)	259,748
(Gain) on disposal of assets	-	(5,409)

For the three months ended June 30, 2017, the Company recorded a net loss of \$636,995 (\$0.00 per share) compared to a net loss of \$5,826,646 (\$0.02 per share) for the three months ended June 30, 2016.

Salaries, wages and consulting fees increased by \$125,278 in Q2-2017 compared to Q2-2016 primarily as a result of increased staff in Brazil.

Legal and audit fees increased by \$129,385 in Q2-2017 compared to Q2-2016. This is due to the costs to appeal against the temporary injunction and suspension of the LI.

General and administration costs increased by \$44,910 in Q2-2017 compared to Q2-2016 primarily as a result of higher regulatory fees such filing and mailing costs as well as consulting fees.

The Company recorded a credit of \$1,446,353 in share-based payments during Q2-2017 related to the vesting accruals of stock options previously granted as well as the issuance and vesting of DSUs to the Company's directors, officers and employees (Q2-2016: \$3,656,681). Expense related to the vesting accruals of stock options was \$346,109 (Q2-2016: \$nil). DSU expense during the quarter was a credit of \$1,792,462 (Q2-2016: \$3,656,681). This related to DSUs granted during previous quarters where vesting accruals are recorded. The DSU expense is dependent on the Company's share price, which decreased during Q2-2017 contributing to the credit.

Exploration and evaluation expenses were \$737,204 for the three months ended June 30, 2017 compared to \$602,821 for the three months ended June 30, 2016. These costs have increased as a result of further costs related to the appeal of the temporary suspension. Engineering costs were \$nil during Q2-2017 (Q2-2016: \$104,670) as these costs are primarily development in nature and are now capitalized to mineral property development.

The Company also recognized a foreign exchange gain of \$30,594 during Q2-2017 (Q2-2016 –a loss of \$259,748) as a result of the effect of fluctuations in the exchange rates between the Brazilian Real and the U.S. dollar.

During the three months ended June 30, 2017, the Company spent \$2,287,155 on operations (three months ended June 30, 2016: \$2,304,174). The Company invested \$61,610 on property, plant and equipment during Q2-2017 (Q2-2016: \$3,608). As well, the Company spent \$1,304,182 on initial development costs for the Volta Grande Project (Q2-2016: \$nil). During the three months ended June 30, 2017, there was no financing activity, however in Q2-2016, the Company received \$1,154,120 from the exercise of stock options.

For the periods ended:

	Year-to-date period ended June 30,	
	2017	2016
Net loss	\$ (9,475,838)	\$ (8,296,080)
Interest income	(363,694)	(95,158)
Salaries, wages and consulting fees	2,921,065	1,878,339
Professional fees	418,576	58,169
General and administration	1,265,420	856,466
Depreciation	87,552	118,689
Share-based payments	2,979,190	3,656,681
Exploration and evaluation expenses	1,844,854	1,185,349
Engineering studies	142,991	184,201
Loss on foreign exchange	179,884	458,753
(Gain) on disposal of assets	-	(5,409)

For the six months ended June 30, 2017, the Company recorded a net loss of \$9,475,838 (\$0.02 per share) compared to a net loss of \$8,296,080 (\$0.02 per share) for the six months ended June 30, 2016.

Salaries, wages and consulting fees increased by \$1,042,726 in 2017 compared to 2016 primarily as a result of bonuses granted during the period.

Legal and audit fees increased by \$360,407 in 2017 compared to 2016. This is due to the costs to complete the application for the LI and appeal against the temporary injunction and suspension.

General and administration costs increased by \$408,954 in 2017 compared to 2016 primarily as a result of higher travel costs and increased administration in Brazil, in large part associated with the work on the LI and the appeal work.

The Company recorded \$2,979,190 in share-based payments during 2017 related to the vesting accruals of stock options previously granted as well as the issuance and vesting of DSUs to the Company's directors, officers and employees (2016: \$3,656,681). Expense related to the vesting accruals of stock options was \$688,415 (2016: \$nil). DSU expense during the period was \$2,290,775 (2016: \$3,656,681). This related to DSUs granted and vested during the period and includes vesting accruals. The DSU expense is dependent on the Company's share price, which decreased during 2017 resulting in the decrease compared to 2016.

Exploration and evaluation expenses and engineering studies were \$1,987,845 for the six months ended June 30, 2017 compared to \$1,369,550 for the six months ended June 30, 2016. These costs have increased as a result of further costs related to the application of the LI and the appeals of the temporary suspension and injunction. The Company began capitalizing costs to mineral property development during the period.

The Company also recognized a foreign exchange loss of \$179,884 during 2017 (2016 – \$458,753) as a result of the effect of fluctuations in the exchange rates between the Brazilian Real and the U.S. dollar.

During the six months ended June 30, 2017, the Company spent \$6,806,095 on operations (six months ended June 30, 2016: \$4,074,147). The Company invested \$2,835,255 on property, plant and equipment during 2017 (2016: \$1,215,420). As well, the Company spent \$1,462,422 on initial development costs for the Volta Grande Project (2016: \$nil). During the six months ended June 30, 2017, the Company paid \$532,754 in cost of issue accrued related to the bought-deal financing during the prior year. As well, the Company purchased \$226,094 of the Company's shares which are held in trust for settlement of share-based payments. During the six months ended June 30, 2016, the Company received \$12,020,400 in private placement proceeds, spent \$35,618 in cost of issue, and received \$1,259,120 in proceeds from the exercise of stock options.

Liquidity and Capital Resources

Given the nature of the Company's operations, the most relevant financial information relates primarily to current liquidity, solvency and planned expenditures. The Company's financial success will be dependent upon the development of a property that leads to the production of gold. Such development may take years to complete and the amount of resulting income, if any, is difficult to determine.

The Company currently has a negative operating cash flow and finances its mineral exploration and development activities through equity financings. The Company's financial success will be dependent on the economic viability of its mineral exploration and development properties and the extent to which it can establish economic mineral reserves and operations.

The Company had working capital (see Non-IFRS Measures) of \$61,049,695 as at June 30, 2017 (December 31, 2016 - \$74,384,000) including cash and cash equivalents of \$70,513,923 (December 31, 2016 - \$82,385,921). None of the cash equivalents are invested in asset-backed securities.

The Company is currently focusing its efforts on the Volta Grande Project.

Term Investment

The Company is carrying a term deposit with Banco do Brasil to fund potential amounts owing to Companhia de Pesquisa de Recursos Minerais (“CPRM”). As at June 30, 2017, the balance of this deposit was R\$1,588,944 (\$623,502) (December 31, 2016: R\$1,518,140 (\$626,233)).

Non-IFRS Measures

The Company has referred to working capital throughout this document. Working capital is a Non-IFRS performance measure. In the gold mining industry, it is a common Non-IFRS performance measure but does not have a standardized meaning. The Company believes that, in addition to conventional measures prepared in accordance with IFRS, we and certain investors use this information to evaluate the Company’s performance and ability to generate cash, profits and meet financial commitments. This Non-IFRS measure is intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. The following tables provide a reconciliation of working capital to the financial statements as at June 30, 2017 and December 31, 2016.

	June 30, 2017	December 31, 2016
Current assets		
Cash and cash equivalents	\$ 70,513,923	\$ 82,385,921
Prepaid expenses and sundry receivables	404,517	269,064
	<u>70,918,440</u>	<u>82,654,985</u>
Current liabilities		
Accounts payable and accrued liabilities	\$ 9,868,745	\$ 8,270,985
Working Capital, current assets less current liabilities	<u>\$ 61,049,695</u>	<u>\$ 74,384,000</u>

Capital Risk Management

The Company includes equity, comprised of issued share capital, shares held in trust for the settlement of share-based payments, share-based payment reserve and deficit, in the definition of capital. The Company’s objective when managing capital is to maintain its ability to continue as a going concern in order to provide returns for shareholders and benefits for other stakeholders.

The Company manages its capital structure and makes adjustments to it based on the funds available to the Company in order to support the acquisition, exploration and development of mineral properties. The Board of Directors does not establish quantitative return on capital criteria for management but rather relies on the expertise of the Company’s management and consultants to sustain future development of the business.

The Company’s properties are in the development stage and, accordingly, the Company is dependent upon external financings to fund activities. In order to carry out planned engineering, test work,

advancement and development of the mining projects, and pay for administrative costs, the Company will spend working capital and expects to raise additional funds from time to time as required.

Management reviews its capital management approach on an ongoing basis and believes that this approach is reasonable given the relative size of the Company. There were no changes in the Company's approach to capital management during the six months ended June 30, 2017. The Company is not subject to externally imposed capital requirements.

Commitments and contingencies

Management Contract Commitments

The Company is party to certain management contracts. These contracts require that additional payments of up to \$23,100,000 be made upon the occurrence of certain events such as a change of control of the Company. Minimum commitments remaining under these contracts were approximately \$795,000, all due within one year.

Legal contingencies

The Company is, from time to time, involved in various claims and legal proceedings. The Company cannot reasonably predict the likelihood or outcome of these activities. The Company does not believe that adverse decisions in any pending or threatened proceedings related to any matter, or any amount that may be required to be paid in connection thereto, will have a material effect on the financial condition or future results of operations. As at June 30, 2017 and December 31, 2016, no amounts have been accrued related to such matters.

Environmental Commitments

The Company's mining, exploration and development activities are subject to various federal, state and international laws and regulations governing the protection of the environment. These laws and regulations are continually changing and generally becoming more restrictive. The Company conducts its operations so as to protect public health and the environment and believes its operations are materially in compliance with all applicable laws and regulations. The Company has made, and expects to make in the future, expenditures to comply with such laws and regulations.

Other Commitments

Under a successfully renegotiated agreement with CPRM in March 2008, the Company maintains an interest-bearing term deposit to cover the future royalty payments, starting June 30, 2008. As at June 30, 2017, no royalty payments have been paid.

The capital resources of the Company are mineral property development at \$1,462,422 and property, plant and equipment at \$14,429,744 (net book value). The Company began capitalizing development costs effective February 2, 2017 upon the initial grant of the LI.

Results of Operation – Exploration and Development

VOLTA GRANDE PROPERTY

Volta Grande, the Company's primary focus, is an advanced-stage exploration and development project located in Pará State, Brazil where gold mineral resources and reserves have been estimated.

Agreement

In 2005, the Company signed an agreement modifying the terms of the acquisition of a 100 percent interest in the Volta Grande Property located in the Pará State, approximately 65 kilometres southeast of the city of Altamira in northern Brazil (the "Volta Grande Property"). Under the original terms of the contract signed in 2004, the Company was to pay to the vendor US\$3 million over four years. Under the modified agreement the Company agreed to pay to the vendor a total of US\$600,000 which was paid in 2006. The transfer of title to the Volta Grande Property occurred following the arrangements with CPRM, whereby the Company has committed to pay CPRM R\$3,740,000 if a mineable deposit is defined on the Volta Grande Property. Payments would begin two years following production and could be paid over ten years on a quarterly basis. As security, the Company had purchased a term deposit of R\$3,740,000.

In March 2008, the Company successfully renegotiated the agreement with CPRM. Under the new terms, CPRM released to the Company R\$3,525,087 of the total term deposit of R\$4,273,087 held in security to cover the Company's debt owed to CPRM. In addition, the Company allocated the balance of the original term deposit that was not released, amounting to R\$748,000, to be retained in an interest-bearing term deposit to cover future royalty payments.

Background

The 100% owned Volta Grande Project is located approximately 65 kilometres southeast of the town of Altamira (pop. 100,000) in the northern region of Pará State.

Gold mineralization was identified at numerous sites in the 1990s by past operators TVX Gold Inc. (now part of Kinross Gold Corporation) and Battle Mountain Exploration (now part of Newmont Mining Corporation). Historical drilling by these companies included more than 27,000 metres of combined core, auger, and reverse circulation drilling and several thousand channel and soil samples. Preliminary metallurgical work indicated that Volta Grande mineralization is amenable to conventional milling and cyanidation process methods, with gold recoveries of up to 95% in bottle roll tests.

The shear-hosted mineral resource at Volta Grande is contained in three main areas (Ouro Verde and Grota Seca located in the North Block, and the South Block), all of which have or have had development in the form of artisanal workings. Within these areas, there are numerous narrow zones of high-grade gold mineralization, with potential for expansion along strike and at depth. There is also potential for the discovery of additional mineralized zones within the large alteration envelope in the host intrusive rocks, which have been traced for more than seven kilometres along strike in the North Block. Two types of gold mineralization are present: primary gold in intrusive rocks and secondary gold in the saprolitic zone overlying the primary mineralization.

The property has been mined historically by garimpeiros (informal miners) for several decades using both open pit and underground mining methods with several shafts of 80 to up to 300 metres along high-grade veins. Grab samples from these shafts have assayed as high as 474.9 g/t Au.

Since 2010, Belo Sun has carried out a large drill exploration program that consisted of over 700 drill holes for a total of over 180,000m drilled (mostly by diamond drilling) at Ouro Verde, Grota Seca and South Block. The results outlined the size of the mineralizing system with a pit-constrained resource extending over 4km on strike and over 0.5km deep for Ouro Verde and Grota Seca.

Feasibility Study

In March 2015, the Company completed a Feasibility Study on its 100% owned Volta Grande Project. The Feasibility Study was prepared in accordance with the definitions set out in National Instrument 43-101 (NI 43-101) of the Canadian Securities Administrators. Projections include:

- Annual gold production of 205,000 oz averaged over a 17.2 year mine life
- Post-tax Internal Rate of Return of 26% using a gold price of US\$1,200/oz and an exchange rate of 3.1:1 (Brazil R\$3.1: US\$1)
- Post-tax Net Present Value of US\$665 million at a 5% discount rate
- Initial capital costs of US\$298 million, including pre-production costs and taxes
- Average cash operating costs of US\$618/oz and all-in sustaining costs of US\$779/oz
- Proven and Probable mineral reserves of 3.8 million ounces of gold (see table below)

See “Cautionary Statement Regarding Forward-Looking Information”.

Summary of Volta Grande Economic Results by Gold Price

	High Case	Base Case	Low Case
Gold Price (US\$ per oz)	\$1,300	\$1,200	\$1,100
Pre-Tax NPV (5%)	\$1,171 million	\$942 million	\$712 million
Pre-Tax IRR	43%	37%	29%
Post-Tax NPV (5%)	\$855 million	\$665 million	\$472 million
Post-Tax IRR	32%	26%	20%

Volta Grande Project Capital Expenditures Estimate Breakdown (Post-tax), in US\$

Initial Capital	
Process & Infrastructure	\$244 million
Mining	\$20 million
Pre-Production Costs - Process	\$3 million
Pre-Production Costs - Mining	\$32 million
Total -- Initial Capital	\$298 million
Total -- Expansion Capital	\$63 million
Average Sustaining Capital over life of mine	\$7.3 million / year

Values have been rounded to the nearest million.

The Feasibility Study capital and operating cost estimates for the Volta Grande Project are summarized below.

Summary of Volta Grande Project Operating Cost Estimates Average Life-of-Mine Operating Cost

Mining	US\$10.62/tonne milled
Processing	US\$7.26/tonne milled
G&A	US\$0.84/tonne milled
Total Operating Cost	US\$18.72/tonne milled
Cash Operating Cost	US\$618/oz
All in Sustaining Cost	US\$779/oz

Volta Grande Mineral Reserves

The mineral reserves for the Volta Grande Project are based on the conversion of measured and indicated mineral resources within the current Feasibility Study mine plan. A portion of the measured mineral resources are converted directly to proven mineral reserves and a portion of the indicated mineral resources to probable reserves. The total fully diluted mineral reserves for the Volta Grande Project are shown below.

Volta Grande Project Proven and Probable Reserves*

Classification	Tonnes (t)	Gold Grade (g/t)	Contained Gold (oz)
Proven	41,757,000	1.07	1,442,000
Probable	74,212,000	0.98	2,346,000
Proven + Probable	115,969,000	1.02	3,788,000

**This mineral reserve estimate is as of March 25, 2015 and is based on the new mineral resource estimate dated March 2015. The mineral reserve calculation was completed under the supervision of Gordon Zurowski, P.Eng of AGP Mining Consultants Inc, who is a Qualified Person as defined under National Instrument 43-101. Mineral reserves are stated within the final design pit based on a USD\$1,020 gold price pit shell with a USD\$1,200 gold price for revenue. The cutoff grade was 0.37 g/t for Ouro Verde and 0.40 g/t for Grota Seca. The mining cost averaged USD\$10.90/tonne milled, processing was USD\$7.25/tonne milled and G&A was USD\$0.84/tonne milled. The process recovery averaged 93%. The exchange rate assumption applied was R\$3.10 equal to US\$1.00 The Feasibility Study only considers the Volta Grande open pit mineralized zones. The Feasibility Study does not include the South Block, nor the Greia Zone. Mineral resources that were part of the March 2015 mineral resource associated with South Block and underground mineral resources were left outside of the scope of the Feasibility Study.*

Mining

The Feasibility Study considers open pit mining using a 100% owner operated equipment fleet including trucks, loaders and drills. The mine has been designed to deliver an initial 3.5 million tonnes per year (10,000 tonnes per day) of mill feed and expand to 7 million tonnes per year (20,000 tonnes per day) reaching full production in Year 3. The Feasibility Study contemplates a mine that will extract ore over a 17.2-year period not including eight months of pre-production stripping. The Feasibility Study optimizes the mine plan for the first eleven years with an average delivered head grade of 1.3 g/t. Material from the last three months of pre-production stripping will be used to commission the process plant.

The average strip ratio for the life of the mine is estimated at 4.3:1. Open pit bench heights of 10 meters will be mined and ore hauled with 136-tonne haul trucks and matching loading equipment. Best practice grade control drilling will be done with reverse circulation drilling and rock sampling on mine benches prior to blasting. This is intended to provide flexibility for grade control during operations while maintaining reasonable mine operating costs and production capability.

Metallurgy

Extensive feasibility level test work was completed by SGS, using representative run-of-mine composites, that confirmed the material from the Volta Grande mineral deposits is amenable to a conventional crush, grind, gravity concentration, cyanide leach and carbon-in-pulp (CIP) flow sheet. Test work results indicated that 40% to 50% of the gold will be recovered in a gravity concentrate.

Infrastructure

The Volta Grande Project is located in Pará State, approximately 60 kilometres south-east of the city of Altamira. Altamira is a major regional centre with a population of 100,000 and is serviced by a local airport and the Trans-Amazonian Highway. Altamira acts as the service center for many large industrial projects in the region.

The climate in the area of the Project is tropical with a rainy season from January to April and a dry season from May to December. The mean temperature is constant throughout the year (25°C to 30°C) and the relative humidity ranges from 65% to 85%.

Access to the mine site from the city of Altamira is by an existing 60 kilometer road that is paved for the first 30 kilometres. The remaining 30km of access road will be upgraded and paved during the mine operation.

Power for the Project will originate from a sub-station located 20 kilometres away and will be brought to the mine project by a 230 kV power line.

Water requirements for the Project will be provided by capturing precipitation and surface run-off. The water collected in storage ponds and augmented by reclaimed water from the tailings management facility should be sufficient to meet operating requirements.

The scientific and technical information contained in the feasibility study pertaining to the Volta Grande Project has been reviewed and approved by the following Qualified Persons: Dr. Jean Francois Couture, PGeo and Dr. Oy Leuangthong, P.Eng (Mineral Resource) of SRK Consulting (Canada) Inc.; Gordon Zurowski, P.Eng (Mining), of AGP Mining Consultants Inc.; Alexandre Luz, MAusIMM (Economic Analysis) of L&M Advisory; Aron Cleugh (Metallurgy and Process) and Stefan Gueorguiev, P.Eng (Infrastructure and Author of the Technical Report), of Lycopodium Minerals Canada Ltd., each of whom are independent of Belo Sun.

See “Cautionary Statement Regarding Forward-Looking Information”.

The revised mineral resource estimate for the North Block of the Volta Grande Project is outlined in the table below with an effective date of March 16, 2015.

Deposit	Category	Quantity Mt	Gold Grade g/t Au	Contained Gold KOz
Ouro Verde Open Pit				
Saprolite	Measured	750	0.96	23
	Indicated	709	0.78	18
	Inferred	216	0.67	5
Unweathered	Measured	18,532	1.16	693
	Indicated	52,647	1.06	1,796
	Inferred	22,576	0.89	643
Grota Seca Open Pit				
Saprolite	Measured	249	0.96	8
	Indicated	1,386	0.74	33
	Inferred	832	0.61	16
Unweathered	Measured	24,270	1.00	782
	Indicated	54,611	0.87	1,519
	Inferred	12,557	0.82	332
Junction Open Pit				
Saprolite	Measured	2	1.53	0
	Indicated	215	0.78	5
	Inferred	82	0.66	2
Unweathered	Measured	271	0.71	6
	Indicated	2,950	0.77	73
	Inferred	1,491	0.75	36
Greia Open Pit				
Saprolite	Inferred	512	1.06	17
Unweathered	Inferred	1,503	2.04	98
Total Open Pit				
	Measured	44,075	1.07	1,512
	Indicated	112,518	0.95	3,444
	Measured + Indicated	156,593	0.98	4,956
	Inferred	39,767	0.90	1,151

Notes:

(1) The 0.4 g/t Au open pit cut-off grade underlying the resource estimates is based on a number of parameters and assumptions including gold price of US\$1,400 per troy ounce, pit angles set at 31 degrees for saprolite and 53 degrees for hard rock, and metallurgical gold recovery of 94% for unweathered and weathered rock. Assumed costs are as follow: open pit mining costs of US\$2.05/tonne of ore, process costs of US\$8.12/tonne, general & administrative costs of US\$0.99/tonne, royalty of 1%.

(2) The quantity and grade of reported inferred mineral resources in this estimation are uncertain in nature and there has been insufficient exploration to define the inferred mineral resources as Indicated or measured mineral resources and it is uncertain if further exploration will result in upgrading them to indicated or measured mineral resource categories.

(3) The mineral resources have been classified according to the Canadian Institute of Mining, Metallurgy and Petroleum Standards for Mineral Resources and Reserves (November 2010). The effective date of this mineral resource estimate is March 30, 2015.

(4) The mineral resource estimate was authored Dr. Oy Leuangthong, P.Eng, a Qualified Person as defined by National Instrument 43-101 and is independent of Belo Sun. SRK Consulting (Canada) Inc. Dr. Leuangthong is not aware of any legal, political, environmental or other risks that could materially affect the potential development of the mineral resources.

Below is a summary of the mineral resource estimation parameters pertinent to the current resource estimate.

The estimation was prepared for the gold deposits located in the North Block. Four zones were separated. The majority of the estimation was carried out for the Ouro Verde and Grota Seca deposits. The Greia zone was separated from Grota Seca, it consists of a near-pit target to the North of the Grota Seca deposit. The Junction Zone is the connection between Ouro Verde and Grota Seca. It highlights some exploration potential along strike length between the two deposits.

The database consists of a total of 33,191 metres of drilling obtained from previously reported drilling and from 180,650 metres of drilling completed and assayed by Belo Sun since April 2010, for the Ouro Verde and Grota Seca deposits.

The mineralized zones at the Ouro Verde deposit extend for about 2,200 m along strike whereas the Grota Seca extends for 2,900m along strike.

For each deposit, Very Low, Low, Medium and High Grade domains were modelled in hard rock as well as in saprolite. The gold mineralization thickness ranges from 2 to 70 metres.

The composite length selected was 2.0 m. Residual composite of length of 0.5m and longer were included in the resource estimation.

Capping analysis was performed on composites for all grade domains. All domains were capped except High Grade Saprolite.

All estimations are based on a fully diluted block model with unitary dimension of 5 m E, 5 m N and 5 m elevation rotated -17° clockwise.

Three estimation passes with progressively relaxed parameters were used for each grade domain. The grade estimation was done using ordinary kriging interpolation. Additional restrictions were set to constrain the grade and radius of influence for the high grade part of the Mid Grade Domain.

Classification was performed using the density of the informing composites. Measured blocks are informed by composites at average distances of 25m (maximum distance is 40m). Indicated blocks are informed by composites at average distances of 50m (maximum distance of 80m).

Tonnage estimates are based on rock specific gravity of 2.75 tonnes per cubic metre for the Grota Seca and Ouro Verde deposits, and 1.36 tonnes per cubic metre for saprolite.

Environmental and construction licensing

In December 2013, the Environmental Council of Pará State, Brazil (COEMA) approved the Environmental Impact Assessment (“EIA”) for Belo Sun’s Volta Grande Project (see press release dated November 18, 2013). The approval of the Environmental Impact Assessment and receipt of the Previous Licence (LP) were key milestones in the advancement of the project towards construction phase. The Company received its Previous Licence in February 2014, which was issued with conditions related to training and capacity building, environmental monitoring, social education and development of local industries.

The Company built a training centre in the local village where training and capacity building workshops in conjunction with the Federal and Pará State agencies are ongoing. As well, the Company completed a study on the indigenous peoples in the region as part of the conditions of the LP. This study involved consultation with the indigenous tribes and other potential indigenous stakeholders in the region.

In February 2017, Belo Sun received its construction licence (“LI”) for the Volta Grande Project. The LI is the final governmental approval authorizing the Company to proceed with construction and development of the project.

However, shortly after receiving the LI, the Company received an order from the judge of the Agrarian Court of Altamira issuing a temporary 180-day injunction halting certain work related to the LI. The purpose of the injunction is to provide time for the relocation of certain families living near the project site and the finalization of the agreement with INCRA involving the overlap of a small portion of the Company’s mining concessions with their urban development project. The relocation plan approved in the LI authorizes families to relocate at a time of the families’ choosing with relocation expenses covered by the Company. The Agrarian Court of Altamira lifted this injunction in June 2017.

In April 2017, the Company received an interim suspension order related to the LI by the Court. According to the order, the LI has been suspended until the indigenous study, completed by the Company has been approved by Funai, the indigenous affairs agency of Brazil. According to Brazilian regulations, indigenous studies are required if indigenous lands are located less than 10 km from a mining project. The Company completed indigenous studies on the two closest indigenous lands, located 12 and 16 km away from the Volta Grande Project, which was accepted by the Secretary of State for Environment and Sustainability. The interim decision by the Court was granted without hearing arguments from either the State of Para or from the Company. The Company believes that following a review of the previously completed indigenous study, the Court will reconsider their position.

Community relations

The Company operates two information offices in order to improve communication and opportunities between the Company and the local communities. The first is in the city of Senador José Porfírio, the municipality that hosts the Volta Grande Project. The office is located in the downtown core, near the City Hall where City Council and other public institutions are located. The second office is located in the Resaca Village near the Volta Grande Project.

Belo Sun is also contributing to the improved accessibility of public services such as health care and education to the local population near the Volta Grande Project by helping to transport doctors, nurses, dentists and teachers to the area. Among other things, these efforts promote the eradication of malaria in the Volta Grande area. Belo Sun also provides transportation on the weekends to local area residents who take a four-hour round-trip boat ride to attend mining-oriented technical courses in the city of Altamira.

Off Balance Sheet Arrangements

The Company is not party to any off-balance sheet arrangements.

Related Party Transactions

During the three and six months ended June 30, 2017 and 2016, the Company entered into the following transactions in the ordinary course of business with related parties that are not subsidiaries of the Company.

	Purchases of goods/services			
	Three months ended		Six months ended	
	June 30,		June 30,	
	2017	2016	2017	2016
2227929 Ontario Inc.	\$ 122,751	\$ 93,655	\$ 216,418	\$ 183,655
Forbes & Manhattan, Inc.	75,000	75,000	\$ 400,000	300,000
Les Consultants Geo Habilis	9,000	-	\$ 12,600	-

The following balances included in accounts payable and accrued liabilities were outstanding at the end of the reporting period:

	Amounts owed by related parties		Amounts owed to related parties	
	30-Jun-17	31-Dec-16	30-Jun-17	31-Dec-16
Directors and officers of the Company	-	-	73,242	133,813
2227929 Ontario Inc.	-	-	1,250	-

The Company shares office space with other companies who may have common officers and directors. The costs associated with the use of this space, including the provision of office equipment and supplies, are administered by 2227929 Ontario Inc. to whom the Company pays a monthly fee of \$40,000, which increased from \$30,000 effective April 2017. 2227929 Ontario Inc. does not have any officers or directors in common with the Company.

Mr. Stan Bharti, a director of the Company, is the Executive Chairman of Forbes & Manhattan, Inc., a corporation that provides strategic planning and business development services to the Company. Forbes & Manhattan, Inc. charges a monthly consulting fee of \$25,000. During the six months ended June 30, 2017, the Company paid a bonus of \$250,000 to Mr. Bharti through Forbes & Manhattan, Inc. (June 30, 2016: \$150,000).

Mr. Stephane Amireault, an officer of the Company, is an officer of Les Consultants Geo Habilis, a company that provides geological services to the Company from time to time.

Sulliden Mining Capital Inc. ("Sulliden") is a related party by virtue of common officers and directors. Mr. Stan Bharti and Mr. William Clarke, directors of the Company, are also directors of Sulliden. Mr. Bruce

Humphrey, a newly appointed director of the Company, is also a director of Sulliden. Mr. Peter Tagliamonte, and officer and director of the Company, is also an officer and director of Sulliden. The Company loaned \$1,000,000 to Sulliden as a short-term loan, which has been repaid. The Company earned \$15,000 in interest and fees as a result of this loan.

The amounts outstanding are unsecured and will be settled in cash. No guarantees have been given or received. No expense has been recognized in the current or prior periods for bad or doubtful debts in respect of the amounts owed by related parties.

Compensation of key management personnel of the Company

The remuneration of directors and other members of key management personnel during the period were as follows:

	Three months ended		Six months ended	
	June 30,		June 30,	
	2017	2016	2017	2016
Short-term benefits	\$ 467,000	\$ 485,750	\$ 2,182,250	\$ 1,550,500
Share-based payments	309,948	-	616,491	-
DSU expense	(1,586,029)	3,404,612	2,193,515	3,404,612
	<u>\$ (809,081)</u>	<u>\$ 3,890,362</u>	<u>\$ 4,992,256</u>	<u>\$ 4,955,112</u>

DSU expense is contingent on the Company's stock price, which decreased during the quarter, resulting in a credit to DSU expense during Q2-2017.

In accordance with IAS 24 Related Party Disclosures, key management personnel are those persons having authority and responsibility for planning, directing and controlling the activities of the Company, directly or indirectly, including any directors (executive and non-executive) of the Company.

The remuneration of directors and key executives is determined by the compensation committee having regard to the performance of individuals and market trends.

More detailed information regarding the compensation of officers and directors of the Company is disclosed in the management information circular. The most recent management information circular is available under profile of the Company on SEDAR at www.sedar.com.

Financial Instruments and Other Instruments

The carrying value of cash and cash equivalents, prepaid expenses, sundry receivable and accounts payable approximate their fair values due to the short maturity of those instruments.

The Company's risk exposures and their impacts on the Company's financial instruments are summarized below. There have been no significant changes in the risks, objectives, policies and procedures for managing risk during the six months ended June 30, 2017.

Credit risk

Credit risk arises from the non-performance by counterparties of contractual financial obligations. The Company's primary counterparties related to its cash and cash equivalents and term investment carry an investment grade rating as assessed by external rating agencies. The Company maintains all of its cash and cash equivalents and term investment with major Canadian and Brazilian financial institutions. Deposits held with these institutions may exceed the amount of insurance provided on such deposits.

The Company's maximum exposure to credit risk at the balance sheet date is the carrying value of cash and cash equivalents, term investment and sundry receivables.

Liquidity risk

Liquidity risk is the risk that the Company may be unable to meet short-term financial obligations. The Company manages liquidity risk by maintaining adequate cash and cash equivalent balances. The Company continuously monitors and reviews both actual and forecasted cash flows, and also matches the maturity profile of financial assets and liabilities.

As at June 30, 2017, the Company had current assets of \$70,918,440 to settle current liabilities of \$9,868,745. Approximately \$3,200,000 of the Company's financial liabilities as at June 30, 2017 have contractual maturities of less than 30 days and are subject to normal trade terms. Of this amount, approximately \$2,300,000 has been payable for over 180 days. The Company's DSU obligations are expected to be settled in cash at the time the holder ceases to be an officer, director or employee of the Company.

Market risk

(a) Interest rate risk

Interest rate risk is the risk that an investment's value will change due to a change in the level of interest rates. The Company's cash equivalents are subject to interest rate cash flow risk as they carry variable rates of interest. The Company's interest rate risk management policy is to purchase highly liquid investments with a term to maturity of one year or less on the date of purchase.

Based on cash and cash equivalent balances on hand at June 30, 2017, a 0.1% change in interest rates could result in a corresponding change in net loss of approximately \$70,000 (December 31, 2016 - \$82,000).

Currency Risk

As the Company operates on an international basis, foreign exchange risk exposures arise from transactions and balances denominated in foreign currencies. The Company's foreign currency risk arises primarily with respect to the United States dollar and Brazilian Real. Fluctuations in the exchange rates between these currencies and the Canadian dollar could have a material effect on the Company's business, financial condition and results of operations. The Company does not engage in any hedging activity to mitigate this risk.

A strengthening of \$0.01 in the United States dollar against the Brazilian Real would have decreased net income by approximately \$65,000 for the six months ended June 30, 2017 (June 30, 2016 - \$60,000). A strengthening of \$0.01 in the Canadian dollar against the United States dollar would have decreased other comprehensive income by approximately \$120,000 for the six months ended June 30, 2017 (June 30, 2016 - \$19,000).

As at June 30, 2017 the monetary balances in non-Canadian dollar currencies are as follows:

		Brazilian Reais
Cash	R\$	464,889
Accounts receivable and prepaid expenses		181,820
Long term investment		1,588,944
Accounts payable		(8,755,584)
	R\$	(6,519,931)

Outstanding Share Data

Authorized unlimited common shares without par value – 465,589,915 are issued and outstanding as at August 10, 2017.

Authorized unlimited special shares – zero outstanding.

Stock options outstanding as at August 10, 2017 are as follows:

Number of stock options outstanding	Exercise price	Expiry date
200,000	\$ 1.14	9-Apr-18
1,753,000	\$ 0.71	19-Aug-18
5,055,000	\$ 0.12	19-Nov-19
7,520,000	\$ 0.22	6-Apr-20
550,000	\$ 0.22	8-Jun-20
4,958,000	\$ 0.85	14-Nov-21
20,036,000	\$ 0.40	

As at August 10, 2017, there were 17,614,000 DSU's outstanding, of which 7,554,500 have vested at August 10, 2017.

Subsequent events

Subsequent to the end of the period, 237,500 vested DSUs were paid out in cash of \$137,500 upon the resignation of an employee of the Company.

Subsequent to the end of the period, 1,915,000 stock options expired unexercised.

Risks and Uncertainties

The operations of the Company are speculative due to the high-risk nature of its business, which are the acquisition, financing, exploration and development of mining properties. These risk factors could materially affect the Company's future operating results and could cause actual events to differ materially from those described in forward-looking information relating to the Company. Please refer to the Company's Annual Information Form for the year ended December 31, 2016 filed on SEDAR on March 28, 2017 for a full description of the Company's risks in addition to those highlighted below.

Nature of Mining, Mineral Exploration and Development Projects

Development projects have no operating history upon which to base estimates of future capital and operating costs. For development projects, mineral resource estimates and estimates of operating costs are, to a large extent, based upon the interpretation of geologic data obtained from drill holes and other sampling techniques, and feasibility studies, which derive estimates of capital and operating costs based upon anticipated tonnage and grades of ore to be mined and processed, ground conditions, the configuration of the mineral deposit, expected recovery rates of minerals from ore, estimated operating costs, and other factors. As a result, actual production, cash operating costs and economic returns could differ significantly from those estimated. It is not unusual for new mining operations to experience problems during the start-up phase, and delays in the commencement of production often can occur.

Mineral exploration is highly speculative in nature. There is no assurance that exploration efforts will be successful. Even when mineralization is discovered, it may take several years until production is possible, during which time the economic feasibility of production may change. Substantial expenditures are required to establish measured, indicated and inferred mineral resources through drilling. Upon completion of a feasibility study, with an accompanying economic analysis, proven and probable mineral reserves may be estimated. Because of these uncertainties, no assurance can be given that exploration programs will result in the expansion of mineral resources or the establishment of mineral reserves. There is no certainty that the expenditures made towards the search and evaluation of mineral deposits will result in discoveries or development of commercial quantities of ore.

Mine development capital cost estimates are vulnerable to market forces, cost escalations and reductions, exchange rate fluctuations and supplier price changes. These factors can affect capital cost estimates.

Mineral Resource and Mineral Reserve Estimates May be Inaccurate

There are numerous uncertainties inherent in estimating mineral resources and reserves, including many factors beyond the control of the Corporation. Such estimates are a subjective process, and the accuracy of any mineral resource or reserve estimate is a function of the quantity and quality of available data and of the assumptions made and judgments used in geological interpretation. These amounts are estimates only and the actual level of recovery of minerals from such deposits may be different. Differences between management's assumptions, including economic assumptions such as metal prices, market conditions and actual events could have a material adverse effect on the Corporation's mineral resource and reserve estimates, financial position and results of operations.

Uncertainty Relating to Mineral Resources

Mineral resources that are not mineral reserves do not have demonstrated economic viability. Due to the uncertainty that may attach to mineral resources, there is no assurance that mineral resources will be upgraded to mineral reserves.

Foreign Operations

At present, the mineral properties of Belo Sun are located in Brazil. As a result, the operations of the Corporation are exposed to various levels of political, economic and other risks and uncertainties associated with operating in a foreign jurisdiction. These risks and uncertainties include, but are not limited to, currency exchange rates; price controls; import or export controls; currency remittance; high rates of inflation; labour unrest; renegotiation or nullification of existing permits, applications and contracts; tax disputes; changes in tax policies; restrictions on foreign exchange; changing political conditions; community relations; currency controls; and governmental regulations that may require the awarding of contracts of local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction. Changes, if any, in mining or investment policies or shifts in political attitudes in Brazil or other countries in which Belo Sun may conduct business, may adversely affect the

operations of the Corporation. The Corporation may become subject to local political unrest or poor community relations that could have a debilitating impact on operations and, at its extreme, could result in damage and injury to personnel and site infrastructure.

Failure to comply with applicable laws and regulations may result in enforcement actions and include corrective measures requiring capital expenditures, installing of additional equipment or remedial actions. Parties engaged in mining operations may be required to compensate those suffering loss or damage by reason of mining activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Licences and Permits, Laws and Regulations

The Corporation's exploration and development activities, including mine, mill and infrastructure facilities, require permits and approvals from various government authorities, and are subject to extensive federal, state and local laws and regulations governing prospecting, development, production, transportation, exports, taxes, labour standards, occupational health and safety, mine safety and other matters. Such laws and regulations are subject to change, can become more stringent and compliance can therefore become more time consuming and costly. In addition, the Corporation may be required to compensate those suffering loss or damage by reason of its activities. There can be no assurance that the Corporation will be able to maintain or obtain all necessary licences, permits and approvals that may be required to explore and develop its properties, commence construction or to operate its mining facilities.

The costs and potential delays associated with obtaining or maintaining the necessary authorizations and licences and complying with these authorizations, licences and applicable laws and regulations could stop or materially delay or restrict the Corporation from proceeding with the development of the Volta Grande Gold Project. The recent litigation process with the Agrarian Court of Altamira, and other claims and injunctions brought against the Corporation are examples of legal claims that affect, and may continue to affect, the Volta Grande Gold Project. Any failure to comply with applicable laws, regulations, authorizations or licences, even if inadvertent, could result in interruption or termination of exploration, development or mining operations or logistics operations, or material fines, penalties or other liabilities that could have a material adverse effect on the Corporation's business, reputation, properties, results of operations, financial condition, prospects or community relations. Claims, lawsuits and injunctions may be brought by parties looking to prevent the Corporation from advancing its projects. The Corporation can make no assurance that it will be able to maintain or obtain all of the required mineral licences and authorizations on a timely basis, if at all. There is no assurance that it will obtain the corresponding mining concessions, or that if they are granted, that the process will not be heavily contested and thus costly and time consuming to the Corporation. In addition, it may not obtain one or more licences. Any such failure may have a material adverse effect on the Corporation's business, results of operations and financial condition.

Environmental

The Company's activities are subject to extensive federal, state and local laws and regulations governing environmental protection and employee health and safety. Environmental legislation is evolving in a manner that is creating stricter standards, while enforcement, fines and penalties for non-compliance are more stringent. The cost of compliance with changes in governmental regulations has the potential to reduce the profitability of operations. Furthermore, any failure to comply fully with all applicable laws and regulations could have significant adverse effects on the Company, including the suspension or cessation of operations.

The current and future operations of the Corporation, including development and mining activities, are subject to extensive federal, state and local laws and regulations governing environmental protection,

including protection and remediation of the environment and other matters. Activities at the Corporation's properties may give rise to environmental damage and create liability for the Corporation for any such damage or any violation of applicable environmental laws. To the extent the Corporation is subject to environmental liabilities, the payment of such liabilities or the costs that the Corporation may incur to remedy environmental pollution would reduce otherwise available funds and could have a material adverse effect on the Corporation. If the Corporation is unable to fully remedy an environmental problem, it might be required to suspend operations or enter into interim compliance measures pending completion of the required remedy. The potential exposure may be significant and could have a material adverse effect. The Corporation intends to minimize risks by taking steps to ensure compliance with environmental, health and safety laws and regulations and operating to applicable environmental standards.

Many of the local, state and federal environmental laws and regulations require the Corporation to obtain licences for its activities. The Corporation must update and review its licences from time to time, and is subject to environmental impact analyses and public review processes prior to approval of new activities. In particular, the Corporation's mineral project is located in the Volta Grande do Xingu region, in the area proximal to the Belo Monte hydroelectric plant, on the Xingu River, which is one of the Amazon's most important rivers. Due to the existence of communities of indigenous peoples and the region's biodiversity, the environmental licensing process of the Belo Monte dam has attracted a great deal of attention from the local communities, non-governmental organizations, the Federal Public Prosecutor Office, the Brazilian Institute of Environment and Renewable Natural Resources, and other Brazilian and foreign institutions. Therefore, environmental licensing of the Volta Grande Project and relations with local communities may be more challenging and time consuming and subject to greater scrutiny as compared to the environmental licensing process and community and social relations for other mineral projects conducted in Brazil. Belo Sun can make no assurance that it will be able to maintain or obtain all of the required environmental and social licences on a timely basis, if at all.

In addition, it is possible that future changes in applicable laws, regulations and authorizations or changes in enforcement or regulatory interpretation could have a significant impact on the Corporation's activities. Those risks include, but are not limited to, the risk that regulatory authorities may increase bonding requirements beyond the Corporation's or its subsidiaries' financial capabilities. Developments elsewhere in the Brazilian mining industry or in relation to Brazilian mining legislation may add to regulatory processes and requirements, including additional scrutiny of all current permitting applications.

Liquidity Concerns and Future Financings

The Corporation will require significant capital and operating expenditures in connection with the development of the Volta Grande Project. There can be no assurance that the Corporation will be successful in obtaining the required financing as and when needed. Volatile markets may make it difficult or impossible for the Corporation to obtain debt or equity financing on favourable terms, if at all. Failure to obtain additional financing on a timely basis may cause the Corporation to postpone or slow down its development plans, forfeit rights in some or all of the Corporation's properties or reduce or terminate some or all of its activities. In the event that the Corporation completes an equity financing, such financing could be extremely dilutive to current shareholders who invested in the Corporation at higher share prices and dilutive as compared to the Corporation's estimated net asset value per share and mineral resource or reserve ounces per share.

Title to Properties

The acquisition of title to resource properties is a very detailed and time-consuming process. The Corporation holds its interest in its properties indirectly through exploration permits and exploration applications. Title to, and the area of, the permits may be disputed or applications may lapse. There is no guarantee that such title will not be challenged or impaired. There may be challenges to the title of the properties in which the Corporation may have an interest, which, if successful, could result in the loss or reduction of the Corporation's interest in the properties. There are garimpeiros (informal miners) operating within the Corporation's property, and there may be issues and difficulties that could arise, including title disputes and the risk of the garimpeiros encroaching onto active areas of the Volta Grande Project.

The Corporation may need to acquire title to additional surface rights and property interests to further exploration and development activities. There can be no assurances that the Corporation will be able to acquire such additional surface rights. To the extent additional surface rights are available, they may only be acquired at significantly increased prices, potentially adversely affecting financial performance of the Corporation.

Project Development Costs

The Company plans to continue to develop its Volta Grande Project. There can be no assurance that this project will be fully developed in accordance with the Company's current plans or completed on time or to budget, or at all.

Litigation

Belo Sun has entered into legal binding agreements with various third parties on a consulting and partnership basis. The rights and obligations that arise from such agreements are open to interpretation and Belo Sun may disagree with the position taken by the various other parties resulting in a dispute that could potentially initiate litigation and cause Belo Sun to incur legal costs in the future. Given the speculative and unpredictable nature of litigation, the outcome of any future disputes could have a material adverse effect on Belo Sun.

Dependence on Key Personnel

The success of the Company is dependent upon the efforts and abilities of its senior management and board of directors. The loss of any member of the management team or board of directors could have a material adverse effect upon the business and prospects of the Company. In such event, the Company will seek satisfactory replacements but there can be no guarantee that appropriate personnel will be found.

Conflicts of Interest

Certain of the directors and officers of the Company may serve from time to time as directors, officers, promoters and members of management of other companies involved in mining or natural resource exploration and development and therefore it is possible that a conflict may arise between their duties as a director or officers of the Company and their duties as a director, officer, promoter or member of management of such other companies.

The directors and officers of the Company are aware of the existence of laws governing accountability of directors and officers for corporate opportunity and requiring disclosures by directors of conflicts of interest and the Company will rely upon such laws in respect of any directors' and officers' conflicts of

interest or in respect of any breaches of duty by any of its directors or officers. All such conflicts will be disclosed by such directors or officers in accordance with applicable laws and the directors and officers will govern themselves in respect thereof to the best of their ability in accordance with the obligations imposed upon them by law.

Disclosure Controls and Procedures

Management of the Company is responsible for establishing and maintaining disclosure controls and procedures. Management has designed such disclosure controls and procedures, or caused them to be designed under its supervision, to provide reasonable assurance that material information relating to the Company, including its consolidated subsidiaries, is made known to the Chief Executive Officer and the Chief Financial Officer by others within those entities.

Internal Control Over Financial Reporting

Belo Sun's management, including the CEO and CFO, is responsible for establishing and maintaining adequate internal control over financial reporting. Under their supervision, the Company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. The Company's internal control over financial reporting includes policies and procedures that:

- Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions, acquisitions and dispositions of the assets of the Company;
- Provide reasonable assurance regarding the prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the annual or interim financial statements.

The CEO and CFO have certified that Internal Controls over Financial Reporting have been designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. Management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission on Internal Control (COSO - 1992) Framework to design the Company's internal control over financial reporting. The Audit Committee of the Company has reviewed this MD&A and the consolidated financial statements for the six months ended June 30, 2017, and Belo Sun's Board of Directors approved these documents prior to their release.

Limitations of Controls and Procedures

The Company's management, including the Chief Executive Officer and Chief Financial Officer, believe that disclosure controls and procedures and internal control over financial reporting, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, they cannot provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been prevented or detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by unauthorized override of the controls. The design of any control system also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Accordingly, because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

Significant Accounting Policies

The Company's significant accounting policies can be found in Note 2 of its annual consolidated financial statements for the year ended December 31, 2016.

New and Future Accounting Pronouncements

Certain pronouncements were issued by the IASB or the IFRIC that are mandatory for accounting periods on or after January 1, 2017 or later periods. Many are not applicable or do not have a significant impact to the Company and have been excluded.

IFRS 9 – Financial Instruments (“IFRS 9”) was issued by the IASB in November 2009 with additions in October 2010 and May 2013 and will replace IAS 39 Financial Instruments: Recognition and Measurement (“IAS 39”). IFRS 9 uses a single approach to determine whether a financial asset is measured at amortized cost or fair value, replacing the multiple rules in IAS 39. The approach in IFRS 9 is based on how an entity manages its financial instruments in the context of its business model and the contractual cash flow characteristics of the financial assets. Most of the requirements in IAS 39 for classification and measurement of financial liabilities were carried forward unchanged to IFRS 9, except that an entity choosing to measure a financial liability at fair value will present the portion of any change in its fair value due to changes in the entity's own credit risk in other comprehensive income, rather than within profit or loss. The new standard also requires a single impairment method to be used, replacing the multiple impairment methods in IAS 39. IFRS 9 is effective for annual periods beginning on or after January 1, 2018. Earlier adoption is permitted. The Company has not yet considered the potential impact of the adoption of IFRS 9.

IFRS 15 - Revenue from Contracts with Customers (“IFRS 15”) addresses how and when entities recognize revenue, as well as requires more detailed and relevant disclosures. IFRS 15 supersedes IAS 11 Construction Contracts, IAS 18 Revenue, IFRIC 13 Customer Loyalty Programs, IFRIC 15 Agreements for the Construction of Real Estate, IFRIC 18 Transfers of Assets from Customers and SIC-31 Revenue - Barter Transactions Involving Advertising Services. The Section provides a single, principles based five-step model to be applied to all contracts with customers, with certain exceptions. The standard is effective for annual periods beginning on or after January 1, 2018. Earlier application is permitted. The Company will assess the impact of adopting IFRS 15 prior to commencement of commercial production.

IFRS 16 – Leases (“IFRS 16”) replaces IAS 17, Leases (“IAS 17”). The new model requires the recognition of almost all lease contracts on a lessee's statement of financial position as a lease liability reflecting future lease payments and a ‘right-of-use asset’ with exceptions for certain short-term leases and leases of low-value assets. In addition, the lease payments are required to be presented on the statement of cash flow within operating and financing activities for the interest and principal portions, respectively. IFRS 16 is effective for annual periods beginning on or after January 1, 2019, with early adoption permitted if IFRS 15, Revenue from Contracts with Customers, is also applied. The Company is still evaluating the impact of the adoption of IFRS 16.

Critical Accounting Estimates

The preparation of the Company's Financial Statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the Financial Statements and reported amounts of revenues and expenses during the reported period. Such estimates and assumptions affect the carrying value of assets, impact decisions as to when exploration and development costs should be capitalized or expensed, and impact estimates for asset retirement obligations and reclamation costs.

Other significant estimates made by the Company include factors affecting valuations of stock based compensation and the valuation of income tax accounts. The Company regularly reviews its estimates and assumptions, however, actual results could differ from these estimates and these differences could be material.
